

MOHAMMED MANZOOR UL HASSAN

Data Analyst | AI & GenAI Learner

Gmail | LinkedIn | GitHub | Portfolio | Phone: +91 7842730946

PROFESSIONAL SUMMARY

Entry-level Data Analyst combining strong hands-on analytics projects with active AI/GenAI learning. Experienced in SQL Server, Excel, Tableau, Power BI, Python, data cleaning, dashboard development, and insight communication. Currently developing skills in LLM APIs, RAG, LangChain, AI agents, and MCP.

TECHNICAL SKILLS

Analytics & BI: SQL Server, Microsoft Excel, Tableau, Power BI, Google Looker Studio, DAX, Business Intelligence, Dashboard Development

Python & Data: Python, Pandas, NumPy, Matplotlib, Seaborn, Plotly, Data Cleaning, EDA, Data Modelling, Data Visualization, Statistical Analysis

AI & GenAI: Prompt Engineering, LLM APIs, LLM API Integration, RAG, Agentic AI, LangChain, AI Agents, MCP, Transformers & LLMs (currently learning)

PROJECTS

Healthcare Re-Admission Analysis | SQL Server, Python, Tableau — [GitHub](#) | [Live Dashboard](#)

- Analyzed 100,000+ diabetic patient encounters across multiple US hospitals over 10 years to study 30-day readmission patterns.
- Used SQL Server and Python (Pandas, NumPy) for data cleaning, feature engineering, and business-question analysis; built a Tableau dashboard.
- Engineered readmission, prior-visit, long-stay, polypharmacy, and high-utilizer features; identified higher readmission rates across utilization and diagnosis patterns.

Bank Loan Default Risk Analysis | SQL Server, Tableau — [GitHub](#) | [Live Dashboard](#)

- Analyzed 255,347 loan records to evaluate borrower and portfolio default risk.
- Created credit-score, DTI, EMI-to-income, and tenure-stability bands and used SQL analysis to compare default rates.
- Built an interactive Tableau dashboard highlighting risk patterns across borrower segments and loan characteristics.

Online Retail Sales & Customer Insights | Excel, SQL Server, Python, Tableau — [GitHub](#) | [Live Dashboard](#)

- Analyzed 2010-2011 online retail transactions using Excel, SQL Server, Python, and Tableau.
- Engineered Revenue, OrderType, and IsCancellation fields; measured customer behavior, sales trends, and purchase patterns.
- Found a 72.39% repeat-purchase rate and that the top 20% of customers generated 77.26% of revenue.

Google Play Store Analytics Dashboard | Power BI, DAX, Data Modeling — [GitHub](#) | [Live Dashboard](#)

- Built a 4-page Power BI report covering executive overview, app performance, pricing & category, and reviews & sentiment.
- Created DAX measures and a data model to analyze app counts, installs, reviews, free vs. paid apps, and sentiment.
- Used visual analysis to highlight install concentration, category patterns, and the large share of free apps.

VIBE CODING PROJECTS

Built and published three standalone interactive web experiences using **HTML, CSS, and JavaScript**, exploring an AI-agent concept, browser-game mechanics, and a developer-themed interactive experience.

Live Projects: [Agent Crew](#) | [Bug Smasher](#) | [Code Empire](#) | [Collection](#)

PROFESSIONAL STRENGTHS

Good communication skills | Multitasking | Calm under pressure | Fast learner | Adaptability | Teamwork

EDUCATION

B.Com (Computer Application), Osmania University / Shadan College for Boys, 2025

CERTIFICATION

Advanced Data Analysis—Full Stack Academy | Completed Feb 2026

PROFESSIONAL DEVELOPMENT

AI/GenAI learning (current): Prompt Engineering, LLM APIs, RAG, LangChain, AI Agents & MCP, Multi-Agent Systems
